

Applying Imidacloprid 75 WP (wetable powder) by Kioritz Soil Injector

The Kioritz soil injector holds up to 96 ounces of fluid and dispenses 1/6 ounce of fluid with each pump when the calibration ring is set on 5. Each oz of Imidacloprid 75 WP will treat an average of 28 diameter inches.

Step 1. Judge whether the soil moisture level is moderate to wet or dry to normal. If you're in doubt about soil moisture level, you should default to the "Dry to Normal Soil" instructions.

Step 2. To make a master batch of treatment mixture, follow the proportions of water and packets of product shown in the Mixing chart below. **Warm water** works best for dissolving the packets. Put the water in a mixing container first. Then add the corresponding number of packets and shake well.

MIXING THE MASTER BATCH		
Amount of Product	Amount of Water for Moderate to Wet Soil	Amount of Water for Dry to Normal Soil
1 oz	7 fl oz.	14 fl oz.
2 oz	14 fl oz	28 fl oz
4 oz	28 fl oz.	56 fl oz.
6 oz.	42 fl oz.	84 fl oz.

Step 3. Measure the trunk diameter of the tree at breast height. This is called "inches dbh."

Step 4. Rake back any leaf litter, needle duff or debris from the base of the tree so that bare soil is accessible. At a distance of **no more than 12 inches from the base of the tree**, make one injector hole in the soil for each inch of trunk diameter. The holes should be evenly spaced around the tree and **no deeper than 2-4 inches**.
Note: For trees that are smaller than 4 inches in diameter, make a **minimum of 4 shallow holes** around the tree.

Step 5. Based on the trunk diameter, pump the injector handle the number of times shown in the Dosing chart below. **Be sure to stay in the same moisture level column as you used for mixing.**

DOSING EACH TREE		
Inches (DBH)	Pumps PER INCH DBH for Moderate to Wet Soil	Pumps PER INCH DBH for Dry to Normal Soil
1-11	1 pump / hole	2 pumps / hole
12-18	1.5* pumps / hole	3 pumps / hole
19-22	2 pumps / hole	4 pumps / hole
>22 should be treated two consecutive years.	3 pumps / hole	6 pumps / hole

* To get the equivalent of 1.5 pumps per hole, do 1 pump in half the holes and 2 pumps in the other half, distributing these two levels evenly around the tree.
