

# 2010 GEORGIA PEST MANAGEMENT HANDBOOK

## *Homeowner Edition*

Special Bulletin 48

Edited by  
Paul Guillebeau, Extension Entomologist

Compiled by  
Detsy Bridges

With contributions from the Departments of  
Agricultural Engineering, Crop and Soil Sciences, Entomology, Forestry and Natural Resources  
and Aquaculture and Fisheries, Horticulture, and Plant Pathology

The University of Georgia Cooperative Extension  
College of Agricultural and Environmental Sciences

The thirty-first edition of the *Georgia Pest Management Handbook* gives current information on selection, application, and safe use of pest control chemicals. The Handbook has recommendations for pest control on farms, around homes, urban areas, recreational areas, and other environments in which pests may occur. Cultural, biological, physical, and other types of control are recommended where appropriate.

Additional information on control of insects, plant diseases, and weeds is available in bulletins, circulars, and leaflets published by the Cooperative Extension. Your county agent will provide copies upon request. Many publications are also available at <http://www.caes.uga.edu/publications>

Recommendations are based on information on the manufacturer's label and on performance data from Georgia research and Extension field tests. Because environmental conditions and methods of application by growers vary widely, suggested use does not imply that performance of the pesticide will always conform to the safety and pest control standards indicated by experimental data.

This publication is intended to be used only as a guide. Specific rates and application methods are on the pesticide label. Refer to the label when applying any pesticide. Please send improvement suggestions to [bugman@uga.edu](mailto:bugman@uga.edu).

COPIES ARE AVAILABLE AT \$15.00 EACH. Visit us on the web at <http://www.ent.uga.edu/pmh>. Please make check or money order payable to the UNIVERSITY OF GEORGIA and send to:

### OFFICE OF COMMUNICATIONS

Cooperative Extension  
117 - Hoke Smith Annex  
The University of Georgia  
Athens, Georgia 30602

Include your name, street address (UPS will not deliver to a Post Office Box), city, state and zip code. Credit card orders can be made by calling (706) 542-2657 or by faxing order information to (706) 542-0817.

# PESTICIDE EMERGENCIES

Pau I Guillebeau, Extension Entomologist

**POISON CONTROL CENTER (HUMAN OR ANIMAL)**  
**National Poison Control Hotline (Spanish speakers available)**  
**(800) 222-1222**

**SPILLS**  
**(800) 241-4113 (Dept. of Natural Resources)**

## **Avoid emergencies/Prepare for emergencies.**

1. Keep children away from pesticides!
2. Do not store pesticide in food or drink containers.
3. Keep gloves and other protective clothing wherever pesticides are used or stored.
4. Have water available to wash pesticides from skin or eyes.
5. Store and handle pesticides in areas where spills will be contained.
6. Assemble and maintain a spill kit wherever you handle pesticides.
7. Make sure that all employees understand how to handle pesticide emergencies.
8. Be familiar with the first aid instructions on the pesticide label.

**Symptoms of pesticide poisoning:** nausea, vomiting, diarrhea, cramps, headache, dizziness, weakness, confusion, sweating, chills, chest pains, difficulty breathing, unconsciousness. If you have any of these symptoms while you are handling pesticides, suspect pesticide poisoning.

---

## **FIRST AID FOR POISONING**

1. Stop the pesticide exposure as quickly as possible. **CALL 911 IF SYMPTOMS ARE SERIOUS! CALL POISON CONTROL (800-222-1222) FOR FIRST AID INFORMATION. YOU WILL NEED THE PESTICIDE LABEL.**
2. If the victim is not breathing, administer artificial respiration at once.
3. Consult the pesticide labeling if possible. Directions for first aid will be on the front panel
4. Otherwise, follow these guidelines.

**SKIN:** drench skin as quickly as possible with plenty of water. Any moderately clean water can be used if not contaminated with pesticides. Remove contaminated clothing. Wash with soap if available. Dry victim and treat for shock. If skin is burned, cover with clean, loose bandage or cloth. Do not apply ointments to burned skin.

**EYE:** Wash eye quickly but gently. Rinse eye with clean water for at least 15 minutes.

**INHALED:** Move victim to fresh air. Warn other nearby people. Loosen clothing that restricts breathing. Administer artificial respiration if necessary.

**SWALLOWED:** Rinse mouth with plenty of water. Give large amounts of water or milk (up to one quart) to drink. Consult the label before you induce vomiting. Do not give liquids or induce vomiting to anyone who is unconscious or convulsive.

5. Take the pesticide label with you to the doctor or hospital. **DO NOT** transport pesticides in the passenger compartment of the vehicle.

---

## **HEAT STRESS**

### **Avoid heat stress.**

1. Acclimate to hot weather or new strenuous activities slowly.
2. Drink plenty of water or sports drinks.
3. Take frequent breaks during hot weather.
4. Plan strenuous activities for the cooler part of the day.

**Symptoms of heat stress:** sweating, nausea, headache, confusion, loss of coordination, dry mouth, fainting. Severe heat stress (heat stroke) is VERY dangerous.

## PESTICIDE EMERGENCIES (continued)

The EPA Guide to Heat Stress in Agriculture is available through your local Extension office.

1. **CALL 911 IF SYMPTOMS ARE SERIOUS!**
2. Move the victim to a cooler area immediately.

### FIRST AID FOR HEAT STRESS

3. Cool the victim as quickly as possible by splashing cool water on them or immersing them in cool water. Do not immerse anyone who is unconscious, convulsive, or confused.
4. Remove all protective equipment or clothing that is keeping the victim too warm.
5. If the victim is conscious, have them drink as much cool water as possible.
6. Keep the victim quiet. Get medical aid vice.

---

## PESTICIDE SPILLS

### Assemble a spill kit.

1. Protective equipment indicated on pesticide label.
2. Absorbent material to soak up liquids (cat litter, sand, sawdust, dirt).
3. Scoop to pick up contaminated absorbent material.
4. Container for contaminated absorbent material (e.g., heavy duty plastic bag).
5. Place contaminated material in heavy duty plastic bag and place in outside trash. Dispose with regular trash.

### Large spills, leaks, pesticide fires

Call Georgia DNR EPD Response Team (800) 241-4113

### Spills on public roads or other public areas

Local sheriff or police.

Georgia State Patrol \*GSP (\*477) on mobile phone

### Smaller spills

1. DO NOT HOSE DOWN SPILLS!
  2. Protect yourself and others.
  3. Stop the spill sources.
  4. Confine the spill with a dike of earth or other materials. Protect water sources.
  5. Absorb liquids with cat litter, sand, earth, etc.
  6. Scoop up contaminated materials. Store securely.
  7. Neutralize contaminated site with bleach, activated charcoal, hydrated lime, or removing contaminated soil.
  8. Absorb any liquids used in during neutralizing.
  9. Contaminated absorbent materials or soil may be land-applied according to the pesticide label.
-

# IMPORTANT TELEPHONE NUMBERS

Paul Guillebeau, Extension Entomologist

**\*EMERGENCY NUMBERS** \* *In an emergency dial 911, especially if the person is unconscious, has trouble breathing, or has convulsions.*

**POISON CONTROL CENTER (HUMAN OR ANIMAL)**  
National Poison Control Hotline (Spanish speakers available)  
**(800) 222-1222**

Physician \_\_\_\_\_ Ambulance \_\_\_\_\_

## **FIRES, SPILLS, LEAKS, ETC.**

Georgia DNR Environmental Protection Division Response Team (pesticide fires, spills, leaks) **(800) 241-4113**

County Police or Sheriff \_\_\_\_\_ City Police \_\_\_\_\_

Georgia Highway Patrol Post (\*GSP (\*477) for mobile phones) \_\_\_\_\_ Fire Department \_\_\_\_\_

## **ENDANGERMENT OF GAME OR FISH**

Georgia Department of Natural Resources (Non-game endangered species) **(800) 241-4113**

U.S. Fish and Wildlife Service **(800) 344-WILD**

## **PHONE NUMBERS FOR PESTICIDE INFORMATION (NON-EMERGENCY)**

**University of Georgia Cooperative Extension Service**  
**(voice) (706) 542-2816 or (fax) (706) 542-3872**  
**email: bugman@uga.edu**

## **PESTICIDE INFORMATION**

National Pesticide Telecommunications Network (NPTN), Oregon State University – General information on toxicology, environmental hazard, etc. (M-F, 9:30am-7:30p m EST) **(800) 858-7378**

Pesticide Manufacturer – The telephone number should be listed on the pesticide label

CropLife America – General information about the pesticide industry (M-F, 9:00 am-5:00pm EST) **(202) 296-1585**

National Response Center – Refers caller to proper government agency for hazardous materials **(800) 424-8802** (Voice/TTY)

## **PESTICIDE DISPOSAL**

Georgia Department of Agriculture **(800) 282-5852**  
EPA Hazardous Waste Hotline (Superfund) **(800) 424-9346**

**EPA SAFE DRINKING WATER HOT LINE** – Interprets residue data and give EPA drinking water regulations. **(800) 426-4791**

Or call your local Health Department or Sanitarian. County \_\_\_\_\_ City \_\_\_\_\_

## **ENFORCEMENT OF PESTICIDE LAWS**

Georgia Department of Agriculture, Entomology & Pesticides Division **(800) 282-5852**

EPA Region IV Pesticides Section **(404) 562-8956**

Safety/Training/Information – Dr. Paul Guillebeau (UGA Cooperative Extension) **(706) 542-2816, bugman@uga.edu**

## FREQUENTLY ASKED QUESTIONS

### How can I find my local Extension office?

Look in phone book or <http://ipm.uga.edu>

### How are my children most likely to be injured by pesticides?

Although the media gives much attention to pesticide risk on food, children are most likely to be injured by pesticides around the home. According to an EPA survey, 50% of households with a child under five years store pesticides within the reach of children.

Many household disinfectants are pesticides that can injure children very quickly. ALWAYS store pesticides safely. NEVER store pesticides in food or drink containers.

### Will pesticides hurt my pets?

Some pesticides are dangerous to pets, but the degree of risk depends on the particular pesticide and the type of animal. Fish, small animals (e.g., lizards), and arthropods (e.g., tarantula) are very sensitive to many pesticides. Remove these types of pets or securely cover their cage/tank whenever pesticides are applied. Pets may be attracted to pesticides formulated as baits. Squirrels or other rodents will eat mouse/rat baits. Dogs will eat slug baits.

The pesticide label will provide more information about the pesticide risks in the section entitled ‘Hazards to Humans and Domestic Animals’. Follow these precautions very carefully. Also, keep pets away from treated areas until pesticide sprays are dry or as directed by the label. Never allow pets to play with pesticide containers.

### How can I get more information about the health and environmental risks of pesticides?

Visit this web site <http://ace.orst.edu/info/extoxnet/> It is an excellent source of information about pesticide risk written in language that you can understand. The EPA website is also a good source of pesticide information. [www.epa.gov/pesticides](http://www.epa.gov/pesticides)

### Which pesticides are the most dangerous?

Pesticides must carry one of three signal words that indicate the acute toxicity of the product.

The most dangerous pesticides carry the word DANGER. ‘DANGER-POISON’ indicates a pesticide that can kill in small amounts. ‘DANGER’ pesticides can cause irreversible eye damage or severe injury to the skin. Less dangerous pesticides will carry the signal words ‘WARNING’ or ‘CAUTION’.

Look for the signal word before you buy the pesticide. Do not buy ‘DANGER’ pesticides unless you are prepared to use them responsibly and store them securely.

Even pesticides with the signal words ‘WARNING’ or ‘CAUTION’ can be associated with chronic illnesses like cancer. Minimize your exposure to all pesticides.

**I have heard that almost all pesticides cause cancer. Is that true?**

Some pesticides have been linked with chronic illnesses like cancer, but most pesticides will not cause cancer. According to the American Cancer Society, there is no strong evidence that pesticide residues on food contribute to human cancer. You can find more information about pesticides and cancer at the EXTOXNET web site. <http://ace.orst.edu/info/extoxnet/>

To minimize your risks, use pesticides sparingly and ALWAYS follow all label directions. You can find more information about pesticide safety at our web site [www.ent.uga.edu/pesticide.htm](http://www.ent.uga.edu/pesticide.htm).

**What are restricted use pesticides?**

Pesticides fall into two broad categories: general use (or unclassified) and restricted use. Any adult may purchase general-use pesticides in many department stores, garden centers, and supermarkets. Restricted-use pesticides (RUP) are more hazardous to humans or the environment. Only applicators that have received special training may purchase restricted-use pesticides at stores licensed to sell RUP. We advise homeowners to avoid the use of any restricted-use pesticide.

**I want to control pests around my home with fewer pesticides. Where can I go for information?**

IPM or 'Integrated Pest Management' is a way to control pests with a combination of tactics. Pesticides may be a part of an IPM program, but using other techniques can reduce the need for pesticides.

If you have roaches in the kitchen, for example, a weekly application of insecticide could control the roaches. However, your family would also be exposed to the pesticide each week. Through an IPM approach, you would reduce the roach's food source through better sanitation; you would remove sources of water (e.g. a leaky pipe); and you would try to seal cracks where roaches like to hide. You may still have to use pesticides occasionally, but an IPM program can greatly reduce the amount of pesticide needed to control the roaches.

Check with your local county Extension office. They can provide a wealth of information. You may also be interested in the Master Gardener program available through your local Extension office.

The University of Georgia has a tremendous amount of information about all kinds of plants and pest problems around the home. You can easily find them by using the plant name and 'UGA' in a search engine. For example, to find information about azalea, use the terms "azalea uga" as search terms.

In many cases, it is possible to reduce the amount of pesticide needed to control pests around the home using IPM. Our web site will help you get started. <http://ipm.ent.uga.edu>

**How can I dispose of unwanted pesticide?**

Avoid leftover pesticide. Only buy the amount of pesticide that you will use within a few weeks. Measure pesticides carefully to avoid mixing more than you need. If you have leftover pesticide mix, apply it to a site listed on the pesticide label. NEVER pour pesticide down the drain.

Rinse empty pesticide containers three times, and pour the rinse water into your sprayer for application to a site listed on the pesticide label. Discard the properly rinsed container with your household trash. DO NOT place any pesticide container with recyclable materials.

If you have pesticide that you do not want, ask your local Extension office for advice. They can tell how to dispose of the pesticide safely and legally.

**What does 'organic' mean on a food label?**

If it includes the USDA seal, it means the product is made with at least 95% organic ingredients. Visit this web site for information [www.ams.usda.gov/nop](http://www.ams.usda.gov/nop)

**Can I still use chlorpyrifos and diazinon products around my home?**

Yes, but the products will no longer be available in stores. FOLLOW the label directions.

**How can I use pesticides safely?**

Use IPM to reduce the amounts of pesticides you use (<http://ipm.ent.uga.edu>) ALWAYS follow the label directions even if this handbook or someone else gives you different information.

# ABBREVIATIONS AND EQUIVALENTS

## FORMULATIONS<sup>1</sup>

a.i. = active ingredient	EC = emulsifiable concentrate	S = sprayable powder
AC = aqueous concentrate	EL = emulsifiable liquid	SC = spray concentrate
AS = aqueous suspension	F = flowable	SP = soluble powder
DF = dry flowable	FC = flowable concentrate	W = wettable powder
DG = dispersible granules	G = granules	WDL = water dispersible liquid
B = bait	L = liquid	WM = water miscible
D = dust	LC = liquid concentrate	WP = wettable powder
E = emulsifiable	M = microencapsulated	

<sup>1</sup> Numbers preceding abbreviations for liquid formulations equal pounds of active ingredient per gallon (e.g., 4EC = 4 lbs./gal. emulsifiable concentrate); numbers preceding abbreviations for solid formulations equal percent active ingredient by weight (e.g., 50WP = 50 percent wettable powder).

## METHOD OR TIME OF APPLICATION

CR = cracking stage	PEI = preemergence incorporated	PRE = preemergence
LV = low volume	PO = postemergence	PT = post transplant
NS = nonselective	POT = postemergence over-the-top	RCS = recirculating sprayer
PDS = postemergence directed spray	PP = preplant	ULV = ultra low volume <sup>2</sup>
PE = preemergence on surface	PPI = preplant soil incorporated	WICK = rope wick applicator

<sup>2</sup> Ultra low volume refers to a total spray volume of one/half gallon or less per acre.

## MEASURES AND EQUIVALENTS

tsp.	=	teaspoonful			1 teaspoonful	=	4.9 milliliters
Tbs.	=	tablespoonful	1 Tbs.	=	3 teaspoonfuls	=	14.8 milliliters
fl. oz.	=	fluid ounce	1 fl. oz.	=	2 tablespoonfuls	=	29.6 milliliters
c.	=	cupful	1 c.	=	8 fluid ounces	=	236.6 milliliters
pt.	=	pint(s) (1.04 lb. of water)	1 pt.	=	2 cupfuls	=	473.2 milliliters
pt./100	=	pint(s) per 100 gallons	1 pt./100	=	1 teaspoonful per gallon		
qt.	=	quart(s) (2.09 lbs. of water)	1 qt.	=	2 pints	=	946.4 milliliters
gal.	=	gallon(s) (8.35 lbs. of water)	1 gal.	=	4 quarts	=	2.7854 liters
oz.	=	ounce		=	1 ounce	=	28.35 grams
lb.	=	pound	1 lb.	=	16 ounces	=	453.59 grams
in.	=	inch	1 in.	=	1000 mils	=	2.54 centimeters (25,400 microns)
ft.	=	feet	1 ft.	=	12 inches	=	30.48 centimeters
yd.	=	yard	1 yd.	=	3 feet	=	91.44 centimeters
mi.	=	mile	1 mi.	=	5280 feet	=	1609 meters (16.09 kilometers)
sq. in.	=	square inch		=	1 square inch	=	6.45 square centimeters
sq. ft.	=	square feet	1 sq. ft.	=	144 square inches	=	929.03 square centimeters
A.	=	acre	1 A.	=	43560 square feet	=	0.4047 hectare
cu. in.	=	cubic inch		=	1 cubic inch	=	16.387 cubic centimeters
cu. ft.	=	cubic feet	1 cu. ft.	=	1728 cubic inches	=	0.0283 cubic meter
cu. yd.	=	cubic yard	1 cu. yd.	=	27 cubic feet	=	0.7646 cubic meter
p.p.m.	=	parts per million	1 p.p.m.	=	1000 p.p. billion	=	1 milligram/Kilogram <sup>3</sup>
p.s.i.	=	pounds per square inch		=	1 p.s.i.	=	70.3 grams per cubic centimeter

<sup>3</sup> 1 milligram/Kilogram or 1 p.p.m. is equal to 1 milligram/Liter of water.

# SUBMITTING SPECIMENS FOR IDENTIFICATION COLLECTION, PREPARATION AND SHIPMENT

## INSECTS, PLANT DISEASES, VIRUS DIAGNOSIS, NEMATODES, WEEDS, FISH, VERTEBRATES

Proper identification of pest problems is the foundation of any control program. The UGA Cooperative Extension Service will help you identify pest problems at little or no cost to you. Contact your local Extension office. In most cases, your local agent can diagnose the problem and advise you about proper control. If the local office can not identify the pest, they will contact the appropriate specialist at the University of Georgia. The telephone number of your local Extension office is listed below. You may also check the web for updated or changed phone numbers <http://www.caes.uga.edu/extension/statewide.cfm>
